

NETWORKED COMPUTER SYSTEMS ADMINISTRATION

2ND YEAR HIGHER VOCATIONAL TRAINING

COMMUNICATIVE SKILLS IN A FOREIGN LANGUAGE (ENGLISH) *ENGLISH FOR IT*

Module 1: Network Engineer: Analyze and Prioritize

- 01 The subjunctive mood
- 02 Logical deduction
- 03 Network engineering vocabulary
- 04 Protocols in network engineering: vocabulary
- 05 *Since* for sentence connection

How can we make logical deductions?

In network engineering it is crucial to make assumptions based on the information that we can see or based on our experience. It is fundamental for:

- Troubleshooting complex issues
- Efficient problem solving
- Designing reliable systems
- Security
- Communication and documentation

What do we use for these logical deductions?

For this purpose, MODAL VERBS will complement our subjunctive mood and will encourage us to express our deductions. Pay attention to them:

- **Must**: if we are convinced what we see is true.

It must have been the power failure that caused the network error.

- **Might, may, can, could**: all these modal verbs can express something that is not sure or that maybe the obviousness is not that clear.

The breach might be bigger than we anticipated.

Those changes may be caused by an error.

What do we use for these logical deductions?

- **Can**: when it doesn't express less obvious things, it could be used for general possibilities.

Thinking of a new password can be difficult.

- **Could**: when it doesn't express less obvious things, it could be used for weak possibilities.

It could be a hardware failure, but we are not sure.

- **Can't, couldn't**: we use these when we believe/know something is impossible.

It can't be a ransomware. Nobody would be so careless.

It couldn't be something that simple.

TEST YOURSELF BEFORE EXERCISES

THINK OF SOME SENTENCES WHERE YOU CAN USE THE FOLLOWING WORDS AND SOME OF THE MODALS THAT WE HAVE EXPLAINED:

**ROUTER
PROBLEM**

BREACH

**ADDRESS
AN ISSUE**

MEETING

**WIFI
CONNECTION**

**FINISH A
PROJECT**

**CHECK
SYSTEMS**

**DATA
BACK-UP**

**BE BEHIND
SCHEDULE**

GO TO YOUR COURSE: EXERCISES

Do exercises 1.2.3 and 1.2.4

Questions?

GO TO YOUR COURSE: EXERCISES

Do exercises 1.2.3 and 1.2.4

Questions?

LET'S CHECK THE FOLLOWING VOCABULARY WORDS

TROUBLESHOOTING

SPIRIT

NETWORK TOPOLOGY

PEERING

MISMATCH

MISCONFIGURED

BGP

NOW: FIRST LISTENING EXERCISE

SPEAKING PRACTICE: TROUBLE-SHOOTING ROLE PLAY

WORK IN GROUPS OF 4-5 PEOPLE

Students will practice technical communication, logical reasoning, and teamwork in English by role-playing a troubleshooting session similar to the dialogue provided.

PREPARATION STRATEGIES:

Have you ever explained a technical problem in English? What makes it difficult?

Elicit vocabulary: *mismatch, logs, configuration, source IP, firewall, session...*

- **Password Mismatch**

1. Logs show authentication failure.
2. Routers have different MD5 hash values configured.

- **IP Addressing Mismatch**

3. One peer has the wrong neighbor IP configured.
4. The session won't establish, even though interfaces are up.

- **TTL Restriction (External BGP)**

5. Peers are not directly connected.
6. Logs show TTL expired in transit.

- **AS Number Mismatch**

7. Configuration looks okay, but logs show wrong autonomous system number.

- **Firewall Blocking TCP Port 179**

8. No BGP connectivity, logs are clean.
9. Firewall on one router is blocking the session.

**POSSIBLE
ISSUES**

THE USE OF SINCE AS A CONJUNCTION

Since can be used in two different ways:

1. Meaning “after” to indicate time

Since the resent updates, we’ve been having a few issues.”

“Since the configuration was changed, those files have been moved to the archive folder.”

1. Meaning “because” or “as” to introduce a reason

“Since network connectivity is a problem, let’s focus on something else until it is resolved”.

WRITING: AN INCIDENT REPORT

An incident report is a structured way to capture the details of a workplace event that affects people, property, or operations. It replaces word-of-mouth accounts with a clear record for your team, supervisors, or HR to reference later.

The purpose of reporting is to identify risks and help prevent similar events in the future. It can:

- Improve workplace safety through visibility
- spot risks before they escalate
- support investigations
- Maintain transparency

AN INCIDENT REPORT: What information?

Every incident report should include the following baseline details:

- Date and time of the incident
- Location where it occurred
- Names, roles, and departments of those involved
- A clear, objective description of what happened
- Names and statements from any witnesses
- Specifics about any injuries, property damage, or hazards
- Any photos, documents, or supporting evidence
- Actions taken immediately after the event
- Suggested corrective actions or recommended next steps

AN INCIDENT REPORT: The steps

1. Start with the facts

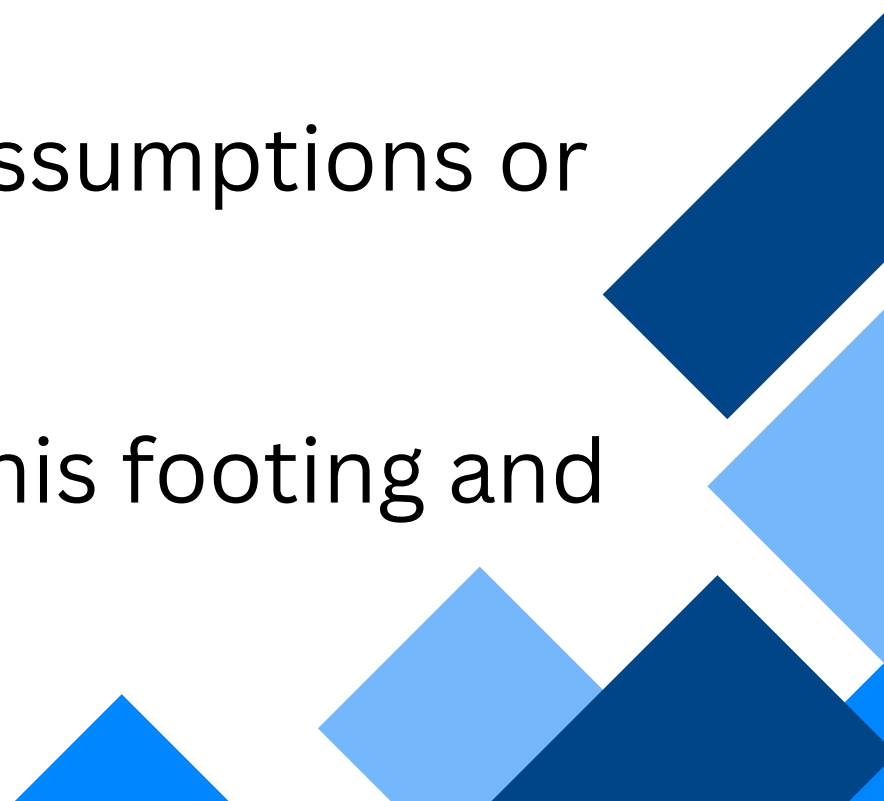

Gather all essential details: who, when, where, and what happened before the event.

Example: “At 3:05 pm on June 14, technician Lucas Brandt slipped on an unmarked wet floor in the lower hallway of Building C.”

2. Describe the incident clearly

Explain what happened in plain terms. Use neutral language, avoid assumptions or speculation, and focus on the sequence of events.

Example: “Lucas was walking toward the storage room when he lost his footing and fell onto his left side.”

AN INCIDENT REPORT: The steps

3. Record injuries or damages

Note any injuries, their severity, and the first aid or medical care provided. Be sure to also document any visible property damage, if applicable.

Example: “Lucas reported pain in his shoulder and was later diagnosed with a mild sprain.”

4. Interview witnesses

Speak with anyone who saw the event or arrived shortly after. Include names, job titles, and a brief summary of what they observed. Some reporting processes may also require witnesses to write a statement for the work incident.

Example: “Witness: Carla Ruiz, maintenance supervisor, stated she had reported the leak two days prior, but no signage was posted.”

AN INCIDENT REPORT: The steps

5. Identify contributing factors

Consider what may have contributed to the event, whether that's unsafe conditions in the work environment, equipment failure, unclear instructions, or other relevant context.

Example: “The absence of caution signage, paired with dim hallway lighting, may have increased the risk.”

6. Attach supporting evidence

Include photos, diagrams, maintenance logs, and, if relevant, medical reports. This kind of documentation will help future reviewers understand what happened and how the team addressed it.

Example: “Attached: Three photos of the floor area taken within 15 minutes of the incident.”

AN INCIDENT REPORT: The steps

7. Submit the report and follow protocols

Send the completed incident report to the appropriate department, typically people ops or a direct supervisor, and confirm that they've received and logged it. Many teams use a standard incident report form to keep things consistent. Reviewing a good incident report example beforehand can also help set expectations for writing a statement for a work incident.

Example: "Report submitted to people and culture and confirmed received by manager J. Thompson on the same day."

AN INCIDENT REPORT: THE TASK

Context

You are a junior network engineer in a medium-sized company. This morning, the IT department received several tickets reporting problems with the company's network. Your task is to analyze the situation and write an Incident Report for your manager.

Example Scenario:

- At 9:15 AM, several employees reported they couldn't access the company's intranet.
- The helpdesk noticed that internet browsing was working fine, but DNS resolution for internal domains was failing.
- After analysis, the network team discovered a misconfiguration in the DNS server after a recent update.

AN INCIDENT REPORT: THE TASK

Write a 150 word Incident Report including the following sections:

1. Incident Description

- What happened? When? Who reported it?

2. Impact Assessment

- Which services/users were affected?
- How serious is the issue? (e.g., high/medium/low priority)

3. Actions Taken

- What troubleshooting steps did you follow?
- What did you discover?

4. Resolution / Next Steps

- How was the issue solved (if solved)?
- If not solved, what actions are needed next?

AN INCIDENT REPORT: THE TASK

Useful Language

- The incident occurred at...
- The issue was reported by...
- The problem affected...
- We identified the root cause as...
- The incident was classified as [high/medium/low] priority because...
- Further actions required include...

EMPLOYEE DETAILS

NAME
DEPARTMENT
PHONE NUMBER

DESCRIPTION OF INCIDENT

Location:	
Date:	Incident Details <i>(How the incident happened, factors leading to the event, and what took place. Be as specific as possible.)</i>
Time:	
Police Notified: ☐ Yes ☐ No	

Incident Causes:	Follow Up Recommendations:

Incident reports are necessary for documenting details of the occurrence while they are most present in the minds of the witnesses and incident reporter. The information that is included in the report can be useful for decision-making on future incidents, identify behavioral patterns and identifying larger issues. To maintain a safe and healthy work environment, a thorough investigation should be undertaken following an incident in order to initiate corrective actions.
